

# Geode Gems!

---

If a cavity forms in igneous or sedimentary rocks, and minerals seep into the space with water, crystals can form and create a geode!

What does your geode look like before you break it?

What question are you trying to answer?

My Hypothesis:

What does your geode look like after you break it? Draw a Picture.

What is the answer to your question?

Key Words:

Hypothesis: A best guess based on what you already know.  
Crystal: A mineral with a specific structure, usually smooth and shiny.
